Discount

50 points

The bidder with the highest discount receives the maximum score.
The bidder with the next highest discount receives points based on dividing the next highest discount into the highest discount and multiplying that percentage by the available points. For example, assume 50% is the highest discount offer, then that bidder would receive 50 points ($50/50=1.00 \times 50=50$). Assume 25% is the next highest discount offer, then that bidder would receive 25 points ($25/50=0.5 \times 50=25$) etc.
